

# Automated Bitcoin Trading – Feinkonzept

Juri S.

May 10, 2025

## Contents

<b>1</b>	<b>Research Objectives</b>	<b>2</b>
<b>2</b>	<b>Contents of Thesis</b>	<b>2</b>
2.1	Market Mechanics . . . . .	2
2.2	Exploratory Data Analysis . . . . .	2
2.3	Risk & Position Size . . . . .	2
2.4	Automation and Test Run . . . . .	3
<b>3</b>	<b>Project Timeline</b>	<b>3</b>
<b>4</b>	<b>Expected Delivery</b>	<b>3</b>

# **1 Research Objectives**

1. Identify statistically significant signals that signal potential short-term price moves.
2. Convert the most promising signal(s) into an executable rule-based strategy.
3. Evaluate performance via back-testing and a four-week live test (16 Jun – 14 Jul 2025).
4. Document robustness, limitations and possible improvements.

# **2 Contents of Thesis**

## **2.1 Market Mechanics**

Here I explain what Bitcoin is and what the value of Bitcoin represents. I then cover the basics of auction theory and why it is important for understanding how markets work. Finally, I discuss the efficient market hypothesis and its relevance to algorithmic trading.

## **2.2 Exploratory Data Analysis**

Here I describe the process of exploring the data. I look at the data in plain terms, plot the bid- and ask-side deltas, check how often and how strongly they move, and see whether large changes line up with later price moves. I also use simple tools such as line charts and histograms to spot patterns that seem to be statistically relevant.

## **2.3 Risk & Position Size**

Here I explain how I handle risk and position size. How I calculate the position size and how I set the stop loss and take profit levels. How I came up with the numbers and how I adjusted them.

## 2.4 Automation and Test Run

Here I describe how I automate the trading process. I explain how the bot is set up to run automatically, how signals are processed, and how orders are sent to the exchange. I also cover how I monitor the system, log trades and errors, and set up alerts for any issues. Finally, I explain how I run a test phase (paper trading) to make sure everything works as expected before using real money.

## 3 Project Timeline

Phase	Weeks / Dates
Exploratory analysis & signal ideation	KW 17 – KW 21 (24 Apr – 26 May)
Parameter tuning & dry-run (paper trading)	KW 22 (27 May – 2 Jun)
Live deployment (real funds)	KW 25 – KW 28 (16 Jun – 14 Jul)
Result analysis & thesis writing	KW 29 – KW 33 (15 Jul – 18 Aug)
Editing, final layout, submission	KW 34 – KW 36 (19 Aug – 5 Sep)

*This timeline could change and is just a rough estimate.*

## 4 Expected Delivery

- Python code for data handling, back-testing and live execution in a GitHub repository.
- Example datasets already available at [OBDeltaData](#).
- A statistical report comparing other strategies I tested and other signals I considered.
- Final thesis detailing methodology, live results and critical reflection.
